SUMMARY

Data Analyst with 4+ years of experience turning TV/media, adtech, customer, campaign, transaction, and operational data into dashboards, data quality controls, and business insights. Built client-facing reports, profiled multi-source datasets, investigated data issues, and explained audience, campaign, and KPI trends to SMEs, product teams, agencies, and business stakeholders.

TECHNICAL SKILLS

Programming & Analysis: Python, R, SQL, Pandas, NumPy, scikit-learn, Statistical Analysis, EDA
Analytics Methods: Data Profiling, Data Validation, Data Cleansing, Trend Analysis, Correlation Analysis, Segmentation, Anomaly Detection, Reconciliation
Cloud & Data Platforms: GCP, BigQuery, BigQuery ML, Vertex AI, Databricks, PostgreSQL, SQL Server, MySQL, NoSQL
Visualization & Reporting: Tableau, Power BI, DAX, KPI Reporting, Dashboards, Data Models, Client Reporting, Insight Summaries
Data Workflows & Tools: Airflow, Spark, PySpark, ETL/ELT, Unix/Linux, Git, Docker, Jira

PROFESSIONAL EXPERIENCE

Data Analyst – University at Buffalo, Buffalo, NY Feb 2025 – May 2026

- Developed Python, SQL, Airflow, and BigQuery workflows that collected, cleansed, validated, and prepared 25+ operational and research datasets for reporting and exploratory analysis.
- Defined data collection standards and quality procedures with faculty and SMEs, covering 5 recurring controls: completeness, duplicates, schema drift, late files, and exception trends.
- Profiled datasets with Python, R, SQL, Pandas, NumPy, and exploratory analysis to identify outliers, compare baseline trends, and evaluate correlations for stakeholder review.
- Optimized recurring SQL jobs and partitioned BigQuery tables, reducing nightly processing time from 2 hours to 35 minutes while preserving audit logs and recovery steps.

Data Analyst - II – Deloitte, Hyderabad, India Jan 2022 – Dec 2024

- Analyzed TV/media datasets for entertainment and news clients, including audience, campaign, customer, transaction, and reference data from 6 source systems using Python, SQL, Spark, Databricks, and Airflow workflows for client reporting and KPI analysis.
- Created 15+ Tableau and Power BI dashboards for client reporting, tracking audience segment trends, campaign KPI movement, delayed events, data completeness, and recurring operational metrics.
- Partnered with SMEs, analysts, engineers, client teams, agency reporting teams, and product stakeholders to clarify reporting requirements, validate findings, and document 40+ source-to-target mappings.
- Implemented reconciliation, cleansing, and data quality rules for volume shifts, missing events, duplicate events, delayed files, and threshold breaches, reducing manual review effort by 80%.
- Translated audience, campaign, customer, and transaction trends into client-ready insight summaries, explaining metric shifts, recurring patterns, data quality risks, root causes, and reporting improvement opportunities.

Data Analyst – WAFU Technologies, Hyderabad, India Dec 2020 – Aug 2021

- Analyzed adtech event, campaign, customer transaction, order, inventory, and payment workflow data across 4 client applications using SQL, Python, and NoSQL to identify reporting gaps, failed events, and operational exceptions.
- Created monitoring queries that identified 5 categories of operational and ad-event exceptions, including event mismatches, order issues, rejected records, inventory gaps, and recurring process failures.
- Modeled 6+ reporting tables and optimized MySQL queries for agency reporting, campaign visibility, customer transaction analysis, status tracking, and operational performance monitoring.

PROJECTS

Audience & Client Insights Dashboard SQL, Python, Tableau, Power BI, DAX

- Designed dashboards to analyze audience engagement, KPI movement, segment comparisons, exception counts, and client reporting patterns across business views.

Data Quality & Anomaly Detection Pipeline Python, R, Pandas, scikit-learn, SQL

- Built a data quality workflow using profiling rules, statistical thresholds, and anomaly detection to flag missing values, duplicates, volume spikes, and abnormal time-series patterns.

BigQuery ML Customer Analytics Pipeline GCP, BigQuery, BigQuery ML, Vertex AI, Airflow, PySpark

- Designed a GCP analytics pipeline to profile customer behavioral data, compare segments, identify trend patterns, and prepare reporting-ready insights.

EDUCATION

University at Buffalo, The State University of New York Jan 2025 – May 2026

Master of Science, Computer Science
Coursework: Machine Learning, Deep Learning, Data Intensive Computing, Analysis of Algorithms, Computer Networks, Computer Security, Operating Systems, Computer Architecture, Project Management

Certifications: Microsoft PL-300; Google Cloud Professional Data Engineer; Microsoft DP-700; Tableau Desktop Foundations
